Special Functions of Mathematical (Geo-)Physics (Applied and Numerical Harmonic Analysis)

Willi Freeden, Martin Gutting

Special Functions of Mathematical (Geo-)Physics (Applied and Numerical Harmonic Analysis) Willi Freeden, Martin Gutting

Special functions enable us to formulate a scientific problem by reduction such that a new, more concrete problem can be attacked within a well-structured framework, usually in the context of differential equations. A good understanding of special functions provides the capacity to recognize the causality between the abstractness of the mathematical concept and both the impact on and cross-sectional importance to the scientific reality. The special functions to be discussed in this monograph vary greatly, depending on the measurement parameters examined (gravitation, electric and magnetic fields, deformation, climate observables, fluid flow, etc.) and on the respective field characteristic (potential field, diffusion field, wave field). The differential equation under consideration determines the type of special functions that are needed in the desired reduction process. Each chapter closes with exercises that reflect significant topics, mostly in computational applications. As a result, readers are not only directly confronted with the specific contents of each chapter, but also with additional knowledge on mathematical fields of research, where special functions are essential to application. All in all, the book is an equally valuable resource for education in geomathematics and the study of applied and harmonic analysis. Students who wish to continue with further studies should consult the literature given as supplements for each topic covered in the exercises.

From reader reviews:

Doris Edwards:

The book Special Functions of Mathematical (Geo-)Physics (Applied and Numerical Harmonic Analysis) gives you the sense of being enjoy for your spare time. You can use to make your capable much more increase. Book can to get your best friend when you getting strain or having big problem with the subject. If you can make reading a book Special Functions of Mathematical (Geo-)Physics (Applied and Numerical Harmonic Analysis) for being your habit, you can get much more advantages, like add your own capable, increase your knowledge about several or all subjects. You can know everything if you like available and read a book Special Functions of Mathematical (Geo-)Physics (Applied and Numerical Harmonic Analysis). Kinds of book are a lot of. It means that, science book or encyclopedia or other folks. So , how do you think about this book?

Brandon Francis:

The publication untitled Special Functions of Mathematical (Geo-)Physics (Applied and Numerical Harmonic Analysis) is the guide that recommended to you to learn. You can see the quality of the book content that will be shown to you actually. The language that article author use to explained their way of doing something is easily to understand. The article author was did a lot of investigation when write the book, to ensure the information that they share to you is absolutely accurate. You also could get the e-book of Special Functions of Mathematical (Geo-)Physics (Applied and Numerical Harmonic Analysis) from the publisher to make you a lot more enjoy free time.

Ryan Fox:

Are you kind of hectic person, only have 10 or maybe 15 minute in your time to upgrading your mind skill or thinking skill also analytical thinking? Then you are experiencing problem with the book as compared to can satisfy your short period of time to read it because this time you only find guide that need more time to be study. Special Functions of Mathematical (Geo-)Physics (Applied and Numerical Harmonic Analysis) can be your answer because it can be read by anyone who have those short time problems.

Virgie Haynes:

As a student exactly feel bored to help reading. If their teacher requested them to go to the library or even make summary for some e-book, they are complained. Just minor students that has reading's internal or real their interest. They just do what the educator want, like asked to the library. They go to at this time there but nothing reading really. Any students feel that reading through is not important, boring and can't see colorful images on there. Yeah, it is for being complicated. Book is very important for yourself. As we know that on this time, many ways to get whatever we wish. Likewise word says, many ways to reach Chinese's country. Therefore , this Special Functions of Mathematical (Geo-)Physics (Applied and Numerical Harmonic Analysis) can make you truly feel more interested to read.
