This book focuses on the analysis and design of low-density parity-check (LDPC) coded modulations, which are becoming part of several current and future communication systems, such as high-throughput terrestrial and satellite wireless networks. In this book, a two-sided perspective on the design of LDPC coded systems is proposed, encompassing both code/modulation optimization (transmitter side) and detection algorithm design (receiver side). After introducing key concepts on error control coding, in particular LDPC coding, and detection techniques, the book presents several relevant applications. More precisely, by using advanced performance evaluation techniques, such as extrinsic information transfer charts, the optimization of coded modulation schemes are considered for (i) memoryless channels, (ii) dispersive and partial response channels, and (iii) concatenated systems including differential encoding. This book is designed to be used by graduate students working in the field of communication theory, with particular emphasis on LDPC coded communication schemes, and industry experts working on related fields.

From reader reviews:

Eunice Bosse:

Information is provisions for people to get better life, information these days can get by anyone in everywhere. The information can be a know-how or any news even an issue. What people must be consider when those information which is inside former life are hard to be find than now is taking seriously which one is acceptable to believe or which one typically the resource are convinced. If you have the unstable resource then you obtain it as your main information you will see huge disadvantage for you. All of those possibilities will not happen with you if you take LDPC Coded Modulations (Signals and Communication Technology) as the daily resource information.

Phyllis Richards:

The book untitled LDPC Coded Modulations (Signals and Communication Technology) contain a lot of information on it. The writer explains the girl idea with easy technique. The language is very clear to see all the people, so do definitely not worry, you can easy to read this. The book was compiled by famous author. The author gives you in the new era of literary works. You can read this book because you can continue reading your smart phone, or gadget, so you can read the book within anywhere and anytime. If you want to buy the e-book, you can available their official web-site as well as order it. Have a nice read.

Sharon Grace:

Many people spending their moment by playing outside along with friends, fun activity using family or just watching TV the entire day. You can have new activity to pay your whole day by looking at a book. Ugh, do you think reading a book really can hard because you have to bring the book everywhere? It all right you can have the e-book, having everywhere you want in your Smartphone. Like LDPC Coded Modulations (Signals and Communication Technology) which is having the e-book version. So , try out this book? Let's find.

Christopher McCrady:

A lot of publication has printed but it is different. You can get it by web on social media. You can choose the best book for you, science, comedian, novel, or whatever through searching from it. It is called of book LDPC Coded Modulations (Signals and Communication Technology). You can include your knowledge by it. Without causing the printed book, it could add your knowledge and make a person happier to read. It is most significant that, you must aware about book. It can bring you from one location to other place.
