Wireless Body Area Networks (WBANs) are expected to promote new applications for the ambulatory health monitoring of chronic patients and elderly population, aiming to improve their quality of life and independence. These networks are composed by wireless sensor nodes (WSNs) used for measuring physiological variables (e.g., glucose level in blood or body temperature) or controlling therapeutic devices (e.g., implanted insulin pumps). These nodes should exhibit a high degree of energy autonomy in order to extend their battery lifetime or even make the node supply to rely on harvesting techniques. Typically, the power budget of WSNs is dominated by the wireless link and, hence, many efforts have been directed during the last years toward the implementation of power efficient transceivers.

Because of the short range (typically no more than a few meters) and low data rate (typically in between 10 kb/s and 1 Mb/s), simple communication protocols can be employed. One of these protocols, specifically tailored for WBAN applications, is the Bluetooth low energy (BLE) standard.

This book describes the challenges and solutions for the design of ultra-low power transceivers for WBANs applications and presents the implementation details of a BLE transceiver prototype. Coverage includes not only the main concepts and architectures for achieving low power consumption, but also the details of the circuit design and its implementation in a standard CMOS technology.

From reader reviews:

Nick Zapata:

Why don't make it to be your habit? Right now, try to ready your time to do the important action, like looking for your favorite publication and reading a reserve. Beside you can solve your long lasting problem; you can add your knowledge by the reserve entitled Ultra Low Power Transceiver for Wireless Body Area Networks (Analog Circuits and Signal Processing). Try to make book Ultra Low Power Transceiver for Wireless Body Area Networks (Analog Circuits and Signal Processing) as your friend. It means that it can being your friend when you feel alone and beside associated with course make you smarter than previously. Yeah, it is very fortuned for yourself. The book makes you considerably more confidence because you can know every thing by the book. So , we need to make new experience along with knowledge with this book.

John Glass:

Your reading sixth sense will not betray an individual, why because this Ultra Low Power Transceiver for Wireless Body Area Networks (Analog Circuits and Signal Processing) guide written by well-known writer who knows well how to make book that can be understand by anyone who have read the book. Written in good manner for you, dripping every ideas and writing skill only for eliminate your own personal hunger then you still hesitation Ultra Low Power Transceiver for Wireless Body Area Networks (Analog Circuits and Signal Processing) as good book not only by the cover but also with the content. This is one reserve that can break don't ascertain book by its deal with, so do you still needing a different sixth sense to pick this specific!? Oh come on your reading through sixth sense already told you so why you have to listening to one more sixth sense.

Harriet Dupree:

This Ultra Low Power Transceiver for Wireless Body Area Networks (Analog Circuits and Signal Processing) is completely new way for you who has attention to look for some information mainly because it relief your hunger of information. Getting deeper you on it getting knowledge more you know or you who still having little bit of digest in reading this Ultra Low Power Transceiver for Wireless Body Area Networks (Analog Circuits and Signal Processing) can be the light food for you because the information inside this kind of book is easy to get by anyone. These books create itself in the form and that is reachable by anyone, that's why I mean in the e-book form. People who think that in publication form make them feel tired even dizzy this e-book is the answer. So there is absolutely no in reading a reserve especially this one. You can find actually looking for. It should be here for you. So , don't miss this! Just read this e-book style for your better life and also knowledge.

Jason Davis:

That reserve can make you to feel relax. That book Ultra Low Power Transceiver for Wireless Body Area Networks (Analog Circuits and Signal Processing) was vibrant and of course has pictures on there. As we

know that book Ultra Low Power Transceiver for Wireless Body Area Networks (Analog Circuits and Signal Processing) has many kinds or variety. Start from kids until youngsters. For example Naruto or Detective Conan you can read and think you are the character on there. Therefore , not at all of book are make you bored, any it can make you feel happy, fun and loosen up. Try to choose the best book for yourself and try to like reading that.
