The Physics of Superionic Conductors and Electrode Materials (Nato ASI Subseries B:)

The following chapters present most of the lectures delivered at the NATO Advanced Studies Institute on "The Physics of Super ionic Conductors and Electrode Materials", held at Odense Univer sity's Mathematics Department between the 4th and 22nd of August, 1980. The aim of the organizing committee was to present in a rather detailed fashion the most recent advances in the computa tional mathematics and physics of condensed matter physics and to see how these advances could be applied to the study of ionically conducting solids. The first half of the meeting was mainly taken up with lectures. In the second week, working groups on the various aspects were set up, the students joining these groups being helped in the implementation of the lecture material. The leaders of these groups deserve special mention for the tremendous effort they put into this aspect of the meeting, particularly: Dr. Aneesur Rahman (Molecular Dynamics group) Dr. Fred Horne (Ion Transport group) Drs. Nick Quirke and David Adams (Monte Carlo methods) Dr. Heinz Schulz (Diffraction group) Dr. John Harding (Defect Calculations group) The Molecular Dynamics group achieved a certain amount of notoriety within the University by appearing to live in the terminal room.

From reader reviews:

Lillie Moreland:

The book *The Physics of Superionic Conductors and Electrode Materials (Nato ASI Subseries B:)* can give more knowledge and information about everything you want. So just why must we leave a good thing like a book *The Physics of Superionic Conductors and Electrode Materials (Nato ASI Subseries B:)*? A number of you have a different opinion about guide. But one aim this book can give many information for us. It is absolutely proper. Right now, try to closer along with your book. Knowledge or info that you take for that, you can give for each other; you may share all of these. Book *The Physics of Superionic Conductors and Electrode Materials (Nato ASI Subseries B:)* has simple shape but you know: it has great and massive function for you. You can search the enormous world by open up and read a book. So it is very wonderful.

Jerome Chisolm:

In this 21st one hundred year, people become competitive in every way. By being competitive currently, people have do something to make these survives, being in the middle of typically the crowded place and notice by simply surrounding. One thing that sometimes many people have underestimated it for a while is reading. Yeah, by reading a publication your ability to survive increase then having chance to endure than other is high. For you who want to start reading the book, we give you this specific *The Physics of Superionic Conductors and Electrode Materials (Nato ASI Subseries B:)* book as starter and daily reading reserve. Why, because this book is usually more than just a book.

Lyle Morales:

Would you one of the book lovers? If yes, do you ever feeling doubt while you are in the book store? Make an effort to pick one book that you never know the inside because don't ascertain book by its include may doesn't work the following is difficult job because you are scared that the inside maybe not as fantastic as in the outside seem likes. Maybe you answer may be *The Physics of Superionic Conductors and Electrode Materials (Nato ASI Subseries B:)* why because the excellent cover that make you consider in regards to the content will not disappoint you actually. The inside or content is usually fantastic as the outside or perhaps cover. Your reading sixth sense will directly show you to pick up this book.

Michael Madden:

Is it an individual who having spare time and then spend it whole day by means of watching television programs or just laying on the bed? Do you need something totally new? This *The Physics of Superionic Conductors and Electrode Materials (Nato ASI Subseries B:)* can be the respond to, oh how comes? A fresh book you know. You are thus out of date, spending your time by reading in this fresh era is common not a nerd activity. So what these textbooks have than the others?
