Affect Regulation Theory: A Clinical Model (Norton Series on Interpersonal Neurobiology) Daniel Hill

The rich, complex theory of affect regulation boiled down into a clinically useful guide.

Affect regulation theory—the science of how humans regulate their emotions—is at the root of all psychotherapies. Drawing on attachment, developmental trauma, implicit processes, and neurobiology, major theorists from Allan Schore to Daniel Stern have argued how and why regulated affect is key to our optimal functioning. This book translates the intricacies of the theory into a cogent clinical synthesis.

With clarity and practicality, Hill decodes the massive body of contemporary research on affect regulation, offering a comprehensible and ready-to-implement model for conducting affect regulation therapy.

The book is organized around the four domains of a clinical model: (1) a theory of bodymind; (2) a theory of optimal development of affect regulation in secure attachment relationships; (3) a theory of pathogenesis, in which disordered affect regulation originates in relational trauma and insecure attachment relationships; and (4) a theory of therapeutic actions targeted to repair the affect regulating systems.

The key themes of Hill's affect-focused approach include: how and why different patterns of affect regulation develop; how regulatory patterns are transmitted from caretakers to the infants; what adaptive and maladaptive regulatory patterns look like neurobiologically, psychologically, and relationally; how deficits in affect regulation manifest as psychiatric symptoms and personality disorders; and ultimately, the means by which regulatory deficits can be repaired. Specific chapters explore such subjects as self states, mentalization, classical and modern attachment theory, relational trauma (and its manifestations in chronic dissociation, personality disorders, and pervasive dissociated shame), supporting self-development in therapy, patient–therapist attunement, implicit and explicit therapeutic actions, and many more.

May be it might be best activity to you.

Harold Walsh:

In this period globalization it is important to someone to acquire information. The information will make someone to understand the condition of the world. The healthiness of the world makes the information quicker to share. You can find a lot of personal references to get information example: internet, newspapers, book, and soon. You can see that now, a lot of publisher this print many kinds of book. The actual book that recommended to you is Affect Regulation Theory: A Clinical Model (Norton Series on Interpersonal Neurobiology) this reserve consist a lot of the information in the condition of this world now. This book was represented just how can the world has grown up. The vocabulary styles that writer use for explain it is easy to understand. The writer made some analysis when he makes this book. Honestly, that is why this book acceptable all of you.

Kenny Hardy:

As a university student exactly feel bored in order to reading. If their teacher asked them to go to the library as well as to make summary for some book, they are complained. Just minor students that has reading's internal or real their hobby. They just do what the teacher want, like asked to the library. They go to at this time there but nothing reading critically. Any students feel that examining is not important, boring as well as can't see colorful pictures on there. Yeah, it is for being complicated. Book is very important for you. As we know that on this period, many ways to get whatever we want. Likewise word says, ways to reach Chinese's country. So , this Affect Regulation Theory: A Clinical Model (Norton Series on Interpersonal

Neurobiology) can make you truly feel more interested to read.
