Wind as a Geological Process: On Earth, Mars, Venus and Titan (Cambridge Planetary Science Old)

Ronald Greeley, James D. Iversen

This book gives an account of geological aspects of windblown material. Aeolian processes play an important role in modifying the surface of the Earth, and they are also active on Mars. Additionally, they are thought to occur on Venus and possibly Titan as well. The authors describe the following aspects: wind as a geological process, the aeolian environment, physics of particle motion, aeolian abrasion and erosion; aeolian sand deposits and bedforms, interaction of wind and topography and windblown dust. A particular strength of the book is that it deals with aeolian processes in a planetary context, rather than as a purely terrestrial phenomenon. In so doing, the authors ably demonstrate how we can gain better understanding of the Earth through comparative planetology. This paperback reissue will enable the book to be used as a text for advanced students in planetary science. Special terms are defined when they are first used. There is a glossary and an exhaustive bibliography.

From reader reviews:

Ruby Pritchett:

Spent a free a chance to be fun activity to do! A lot of people spent their free time with their family, or their very own friends. Usually they doing activity like watching television, going to beach, or picnic in the park. They actually doing same task every week. Do you feel it? Do you need to something different to fill your current free time/ holiday? Can be reading a book may be option to fill your cost-free time/ holiday. The first thing that you'll ask may be what kinds of book that you should read. If you want to attempt look for book, may be the publication untitled Wind as a Geological Process: On Earth, Mars, Venus and Titan (Cambridge Planetary Science Old) can be fine book to read. May be it can be best activity to you.

John Pasko:

Do you one of the book lovers? If so, do you ever feeling doubt if you are in the book store? Make an effort to pick one book that you find out the inside because don't assess book by its include may doesn't work is difficult job because you are afraid that the inside maybe not seeing that fantastic as in the outside appearance likes. Maybe you answer can be Wind as a Geological Process: On Earth, Mars, Venus and Titan (Cambridge Planetary Science Old) why because the excellent cover that make you consider about the content will not disappoint an individual. The inside or content will be fantastic as the outside or even cover. Your reading sixth sense will directly direct you to pick up this book.

Roger Everman:

In this age globalization it is important to someone to get information. The information will make anyone to understand the condition of the world. The healthiness of the world makes the information much easier to share. You can find a lot of recommendations to get information example: internet, magazine, book, and soon. You can see that now, a lot of publisher that print many kinds of book. The particular book that recommended for your requirements is Wind as a Geological Process: On Earth, Mars, Venus and Titan (Cambridge Planetary Science Old) this book consist a lot of the information in the condition of this world now. This specific book was represented so why is the world has grown up. The words styles that writer use to explain it is easy to understand. The particular writer made some analysis when he makes this book. Honestly, that is why this book appropriate all of you.

William Holmes:

Many people said that they feel uninterested when they reading a reserve. They are directly felt this when they get a half regions of the book. You can choose typically the book Wind as a Geological Process: On Earth, Mars, Venus and Titan (Cambridge Planetary Science Old) to make your personal reading is interesting. Your own personal skill of reading proficiency is developing when you just like reading. Try to choose basic book to make you enjoy to see it and mingle the sensation about book and studying especially. It is to be 1st opinion for you to like to available a book and examine it. Beside that the book Wind as a

Geological Process: On Earth, Mars, Venus and Titan (Cambridge Planetary Science Old) can to be your friend when you're sense alone and confuse using what must you're doing of their time.
